

Digital Credit for Smallholder Farmers: a pilot in Myanmar

Early findings from the field
February 19, 2020

Christopher Ian Brett
Asuka Okumura
Agriculture and Food GP
The World Bank

**We would like to express our sincere thanks to
the Government of Korea to make this pilot happen.**

Background

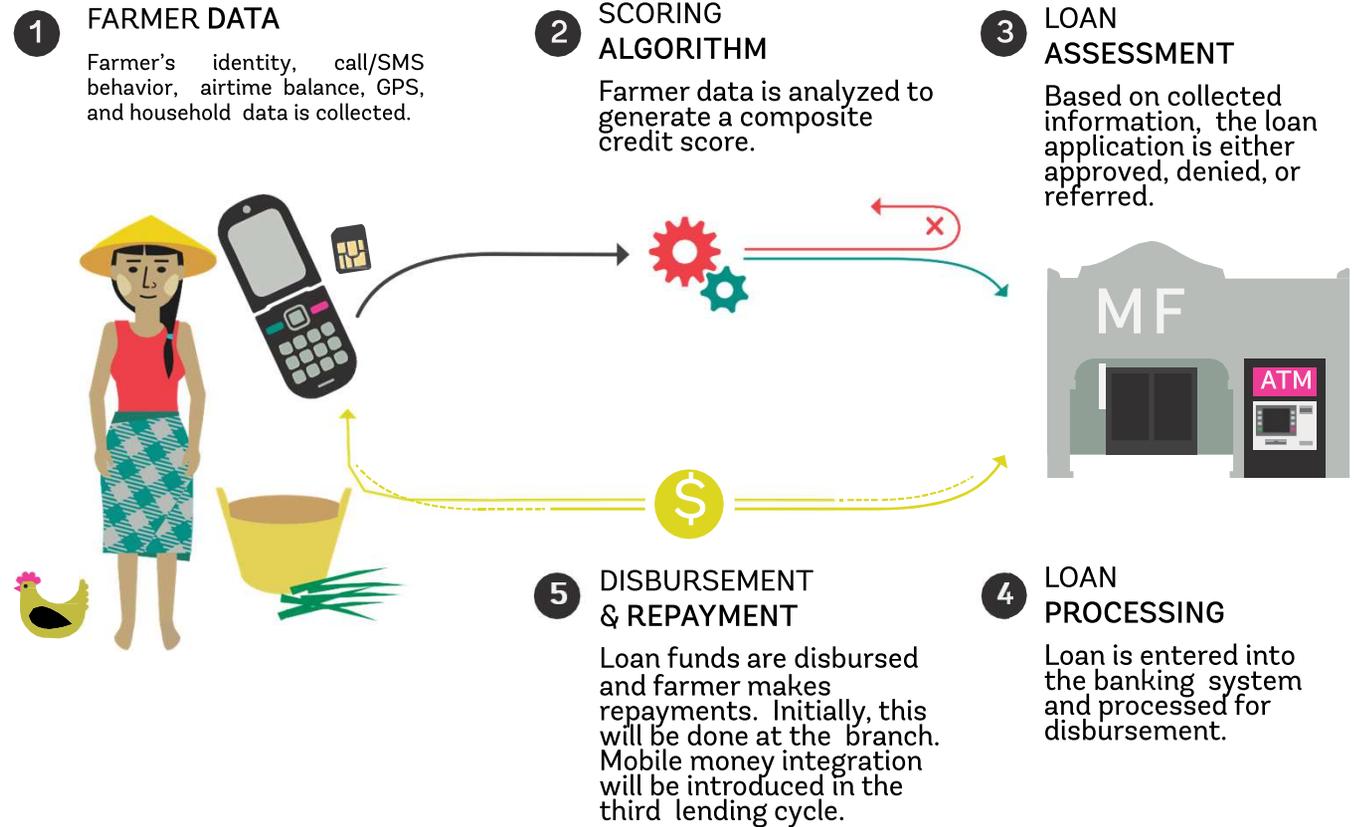

Problem

- Delivering financial services to smallholder farmers tends to be costly and difficult
- Lack of access to such services reduces investment in agricultural inputs and lowers farmers' productivity.
- Constraints preventing financial institutions to provide finance to smallholder farmers include:
 - cost of reaching farmers
 - high transaction costs for short-term small loans
 - difficulties in cash management in rural areas
 - limited financial track record of farmers
 - difficulties to assess agricultural production risk

Objectives

This project aims to **test the use of big data and mobile platform as a way to reduce the cost of lending to smallholders**

- Test the ability of advanced ICT to deliver lending to small holder farmers
- Prove it could reduce costs, risks to make it commercially sustainable for financial institutions
- Generate knowledge and learning to share

Project description

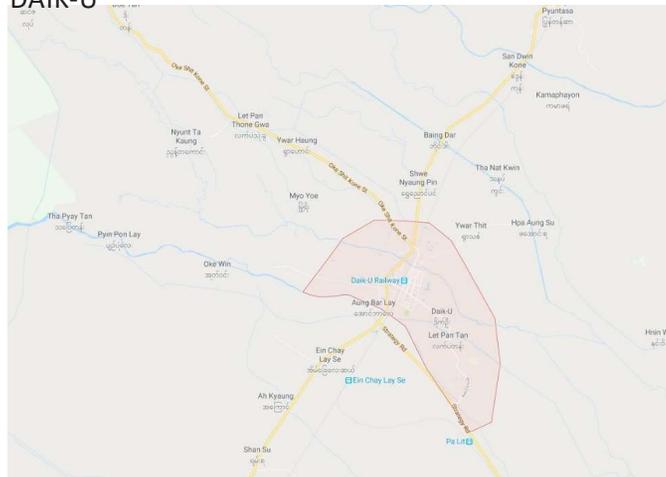

Location

2 townships in eastern Bago region

NYAUNG LAY PIN

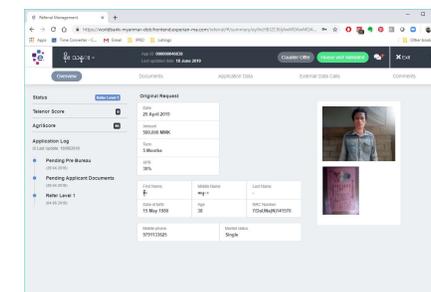

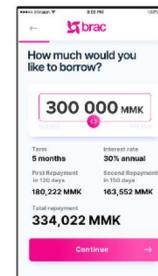

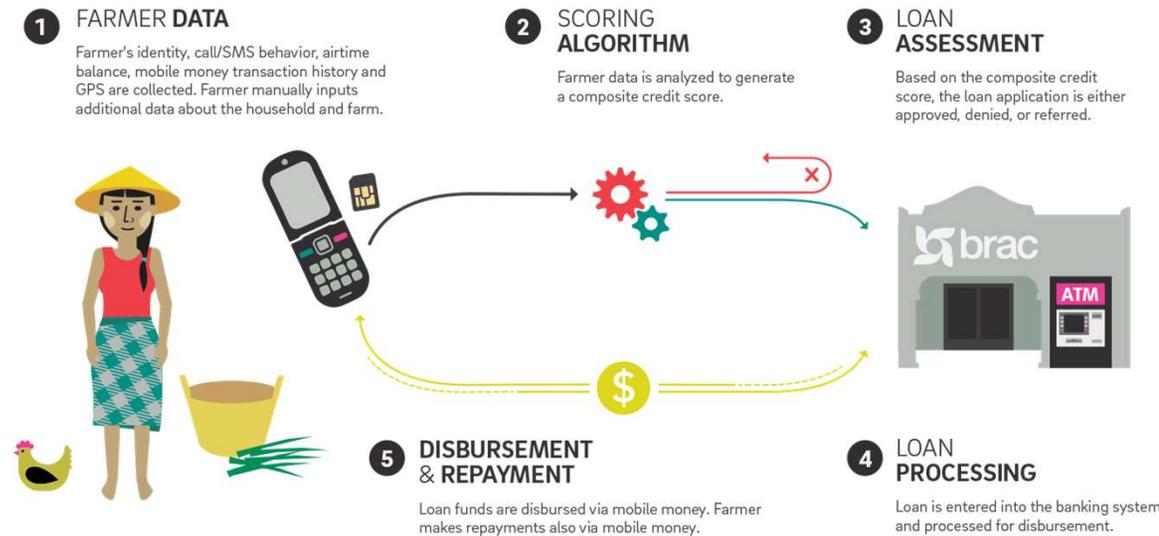

DAIK-U

Key features of the digital lending platform

- Mobile based application interface for borrowers
- Digital data/process management
- Credit analysis
 - Traditional human based analysis
 - Telco Score
 - Agri Score
- Mobile money

Key stakeholders

The World Bank
The Facilitator

- Project support function
- Vendor Procurement
- Support with research & design to help inform new product and processes
- Develop learnings and knowledge to share globally

Brac MFI
The Lender

- Ensure a robust lending process
- Maintain regulatory compliance
- Provide loans to smallholders
- Report on pilot progress (smallholder lending)

L-IFT

L-IFT
The Promoter

- Support of go to market activities
- Provide hands-on client support during the application process

Telenor
The Phone Data

- Provision of data for scoring
- Ensure compliance with regulatory issues relating to data sharing

aWhere

aWhere
The Ag Data

- Provision of data for scoring

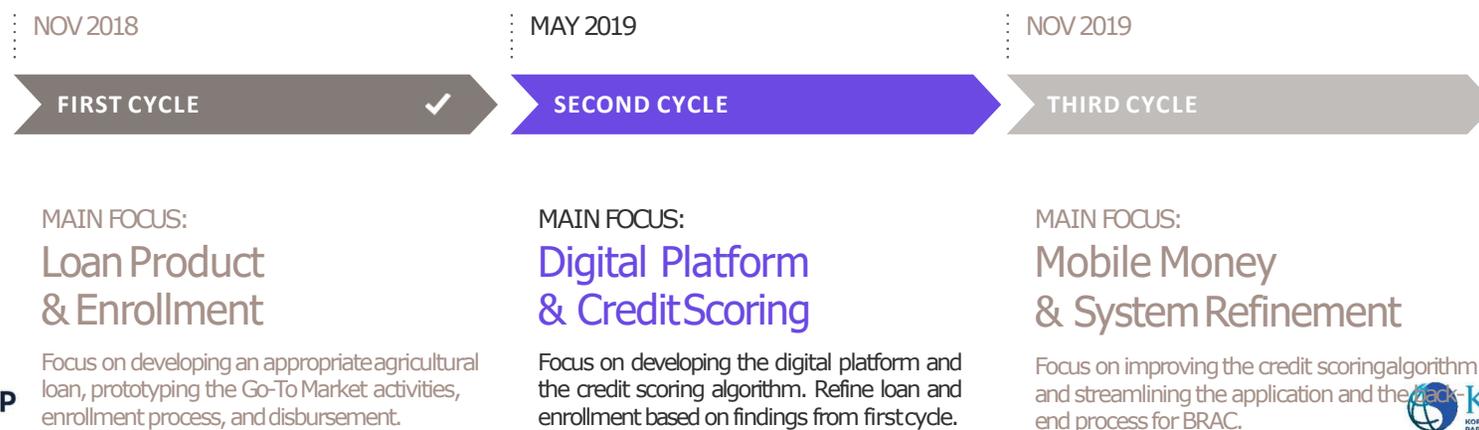

Ongo
Mobile Money

- Ensure direct channel access to smallholder farmers
- Provide agent support in pilot area

Activities

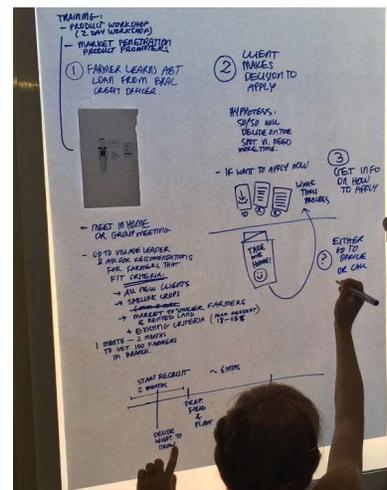

- Field research to inform project design
- Development of strategy
- Building a digital platform
- Training
- Outreach
- 3 lending cycles – the iterative approach to develop and refine with every cycle

Approach

Human center design approach to design a product

- Understand
 - field research
- Define
 - design a proto type
 - field test
- Develop
 - strategy/products
- Deliver

Approach

High “touch” approach

Specially trained individuals to conduct hand-holding activities

Loan product overview

- Available for any crop
- No land title is necessary
- Loan amount: 150-500K kyat (approximately USD100-300)
- Loan duration: 5 month
- Repayment schedule: no payment for 3 month, 50% repayments on each end of 4th and 5th month
- Borrower must used a Telenor SIM card at least 6 month

Outcomes

	Farmers reached	Completed applications	Approved loans	Disbursed loans	Repaid loans	Repayment rate
1 st cycle	785	458	227 (141)	227 (141)	227 (141)	100%
2 nd	957	709	453 (278)	453 (278)	453 (278)	100%
3 rd	884	884	811	761 (573)	-	-

Total number (number for women)

Key findings

A loan product for smallholder farmers

- Demand for loan products among smallholder farmers is high – especially farmers who don't have land title
- Repayment structure to accommodate farmers' cash flow is vital
- The idea of interest rate (instead of actual interest amount) confused many farmers
- VERY high repayment rate (no default) – potential for **business opportunities for commercial lenders**
 - Balance between farmers' needs and financial institutions' operational/risk criteria to be commercially viable

Digitization – borrowers' end

- Gap between mobile phone “ownership” and “usage”
 - Passive/limited use of their phones
 - Challenges around SMS, web browser, downloading apps
 - Fake smartphones are common
 - Phones bought abroad - difficult to change any settings without expert help
- Phones are frequently shared, lost, or broken; SIM card are often swapped
- Internet access in the rural area is still relatively poor
 - An offline solution is vital
 - Uploading large files (e.g. photo) is challenging
- Local reality vs international standard
 - Font/text: team experienced numerous issues with Myanmar text
 - KYC (Know Your Customer) process: e.g. birthday, address
- Privacy
 - Data privacy
 - A potential advantage in a long run

“I don't know how to use the Internet... I never make calls, just answer.”

Digitization - lender' end

- Digitizing loan \neq complete automation
 - Balance between flexibility and efficiency
 - Time to build trust in technology
 - Frequent power outage
- Increased efficiency is a long-term goal
- Last one mile to deliver the digital service

No.	Name	Address	Phone	Status	Date	Amount
1	U Aung	U Aung	U Aung	U Aung	U Aung	U Aung
2	U Aung	U Aung	U Aung	U Aung	U Aung	U Aung
3	U Aung	U Aung	U Aung	U Aung	U Aung	U Aung
4	U Aung	U Aung	U Aung	U Aung	U Aung	U Aung
5	U Aung	U Aung	U Aung	U Aung	U Aung	U Aung

Training of staff

- Role-play training worked well
- Sufficient training program for each function:
 - Credit officers (BRAC)
 - Field agents (L-IFT)
- Develop rapport among teams

Outreach

- Sufficient number of local agents
 - Local knowledge especially on farmers life
 - Familiarity with mobile tools
 - Hand-holding activities for each borrower
- Finding the right community leaders
- Group meetings - well attended with some challenges with bringing right people with proper documents
- Brochure to let potential borrowers bring homes

Next steps

<Agriculture and Food GP>

- Lessons learned to be applied on projects focusing on smallholder farmers in selected value chains (e.g. Pipeline project in Myanmar, Cocoa value chain in Ghana, Cote d'Ivoire)
- Tailored digital literacy training for smallholder farmers

<Across WBG>

- A lending platform has been built and under continuous improvement so that bigger number of borrowers can be reached in the future; potential for IFC's investment in selected micro finance institutions to expand or replicate the system.
- Farmers' appetite and preference on financial products have been collected through interviews with selected farmers; potential to inform FCI's advisory service on Myanmar Agriculture Development Bank.
- Issues around ICT infrastructure in the rural area and the level of digital literacy of farmers have been collected through interviews with selected farmers; potential to inform Digital Development GP's Digital Myanmar project.
- Data protection / data management discussion

Thank You!

Appendix

Field research findings which informed the product design

- Even though majority of participants had smart phones, few knew how to use them for more than just making phone calls.
- Awareness of Mobile Money is high in the area, but not many people actually use it.
- Agricultural Practices

<NLP>

- Dryer soil, most crops require irrigation.
- Primary crops in the region are:
 - Rainy season: rice
 - Dry season: beans (mung beans, black turtle beans), Some seasonal vegetables (irrigation required), flowers
Dry season rice (irrigation required)

<Daik-U>

- Near a river system
- Primary crops in the region are:
 - Rainy Season: rice
 - Dry season: beans (mung beans, black turtle beans), Corn (human consumption and animal feed), Peanuts
Roots: Turmeric, little ginger, Artalut root, Seasonal vegetables: cucumber, lady's finger, Roselle, watermelon, chill etc.
- Engagement Models: Completely digital model, mobile money agent model, BRAC agent model, input supplier model
 - Most popular model was the BRAC agent model to include BRAC officer only
 - comfort from in-person interactions
 - no other parties in between
 - more private than agent or supplier
