World Health  
Organization

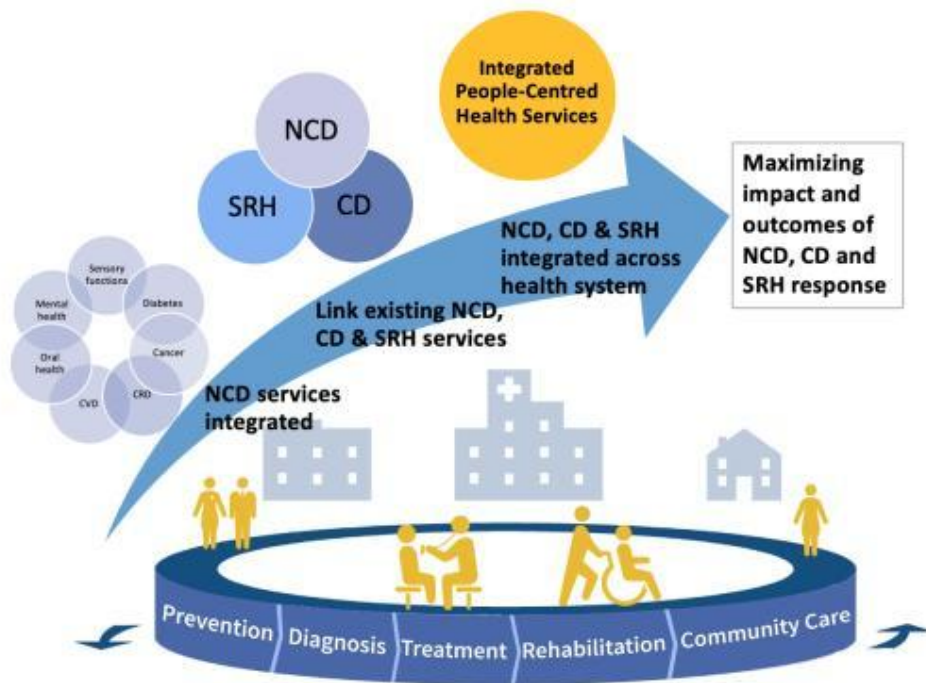

# Member States' TOP DEMANDS for technical assistance

We need a paradigm shift and build back better by including the prevention, screening, early diagnosis and appropriate treatment of NCDs as a part of PHC for UHC.

Dr Tedros, 14 July 2020

# What does it mean?

## Integration continuum

**The WHO working definition of integration is:** *“The organization and management of health services so that people get the care they need, when they need it, in ways that are user friendly, achieve the desired results and provide value for money.” (WHO, 2008).*

- Integration of NCD preventive, curative and rehabilitative services
- Integration of services for NCDs, CDs and SRH: addressing comorbidities/multimorbidity
- Integration of services for NCDs, CDs and SRH throughout the health system

# How to do it ?

Using Framework of 18 evidence based strategic actions :

- **Strengthen Upstream policy initiatives**, such as strategic planning and resource allocation, benefit packaging and payment systems.
- **Service provider engagement**, such as primary health service management, organization and coordination, and essential health service packaging at level of healthcare facilities.
- **Human resource and capacity interventions**, particularly in settings with limited health workforce and financial resources.

NCD Integration Actions	
Domains	Action
People and Community	Engage and Empower people living with NCDs (PLWNCDs) and communities
	Develop measurements and monitoring systems that are user-centred
Policy and Leadership	Provide policy directives for integration
	Align political, institutional and health systems with the necessary resources
	Provide transformational leadership and good change management
Financing and Funding	Harmonize financing or funding models and sources with national health plans and NCD service integration
	Ensure that funding is available for structural resources, software and service models
Capacity and Infrastructure	Build multidisciplinary NCD teams
	Provide comprehensive, tailored, flexible, interactive training on integration
	Ensure strong operational management and human resources development
	Provide adequate infrastructure for delivering integrated NCD care
	Develop strong procurement systems to meet the requirements of NCD integration
Models of care	NCD information for integration
	Assess health system functioning, strength and readiness for change before integration
	Redefine and ensure that planned NCD service integration is compatible, acceptable, feasible and fits well with existing services
	Clarify the roles and functions of providers
	Engage with managers and providers throughout integration
	Ensure effective coordination, supportive supervision and mentoring

# Key solutions to strengthen health system response to NCDs

## Governance

- NCD in NHPSP
- Policy fostering Integration
- Multisectoral with Private Sector

## Health financing

- NCD Investment Case
- **NCD in UHC Benefit package**
- Leveraging Financing

## Medicines & tech

- Strengthening Value Chain
- Private Sector Contribution
- Access investments for NCD integration

## Health workforce

- NCD Workforce planning
- Provider Engagement
- Competency based Capacity building
- Worker wellness

## Service delivery

- Integrated Chronic Care
- Community Mobilization
- Service delivery Model

## Health information

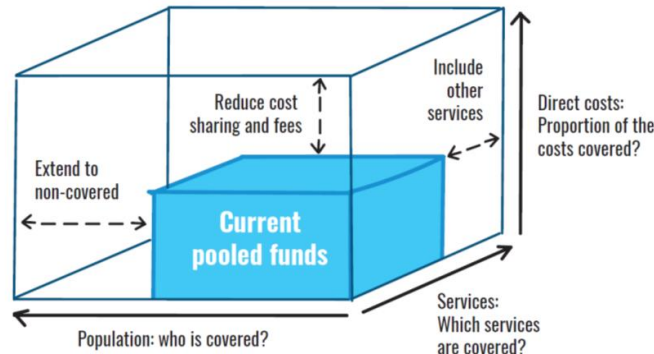

# PRIORITIZE NCD in UHC Benefit Package

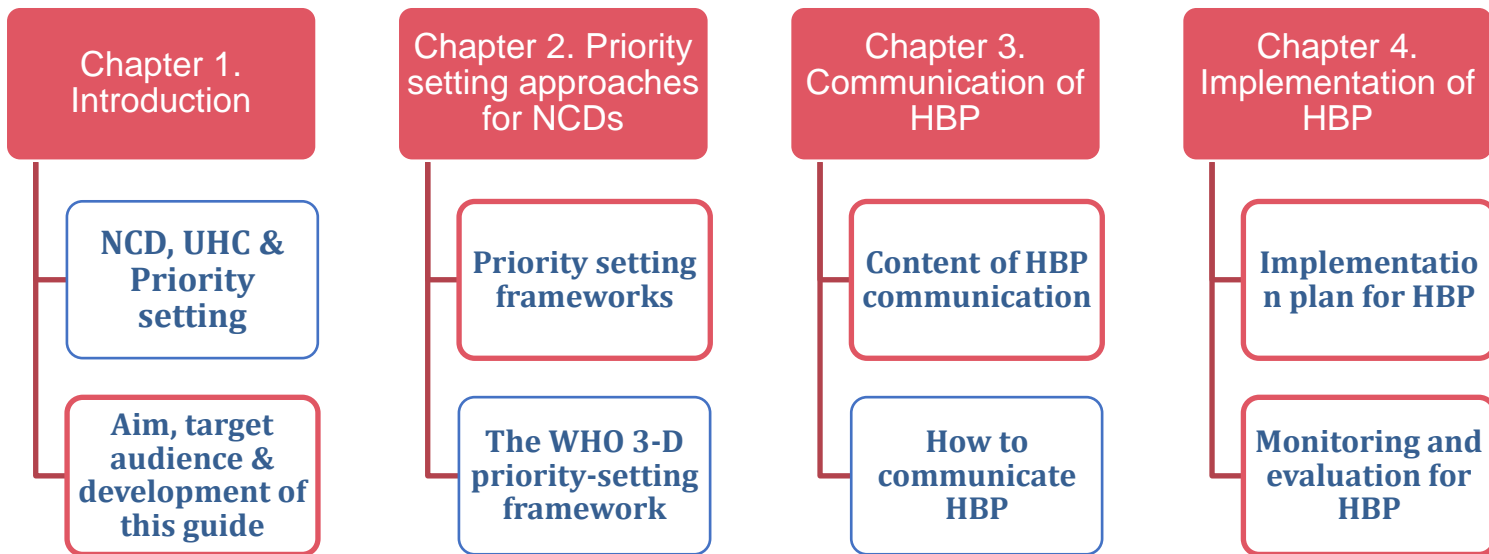

- Development of **global guidance** on effective design of UHC benefit packages with focus on strengthening NCD input.
- Development of **priority services listing for NCD using UHC Compendium of interventions**
- **Support countries** in developing UHC Benefit Packages with comprehensive NCD input

# What is a UHC Benefit Package?

- The UHC Benefit Package is a public instrument used to govern the allocation of collective resources for health
- Different names: Benefit Packages or Essential Health Service Packages, etc.
- Explicit list of health interventions or services to be funded from pooled resources with clear accountability, entitlements and real universal access
- Usually incorporate information on payment mechanisms and information on level of service delivery.

# Guidance on approach to prioritization of NCD interventions in UHC health benefit package

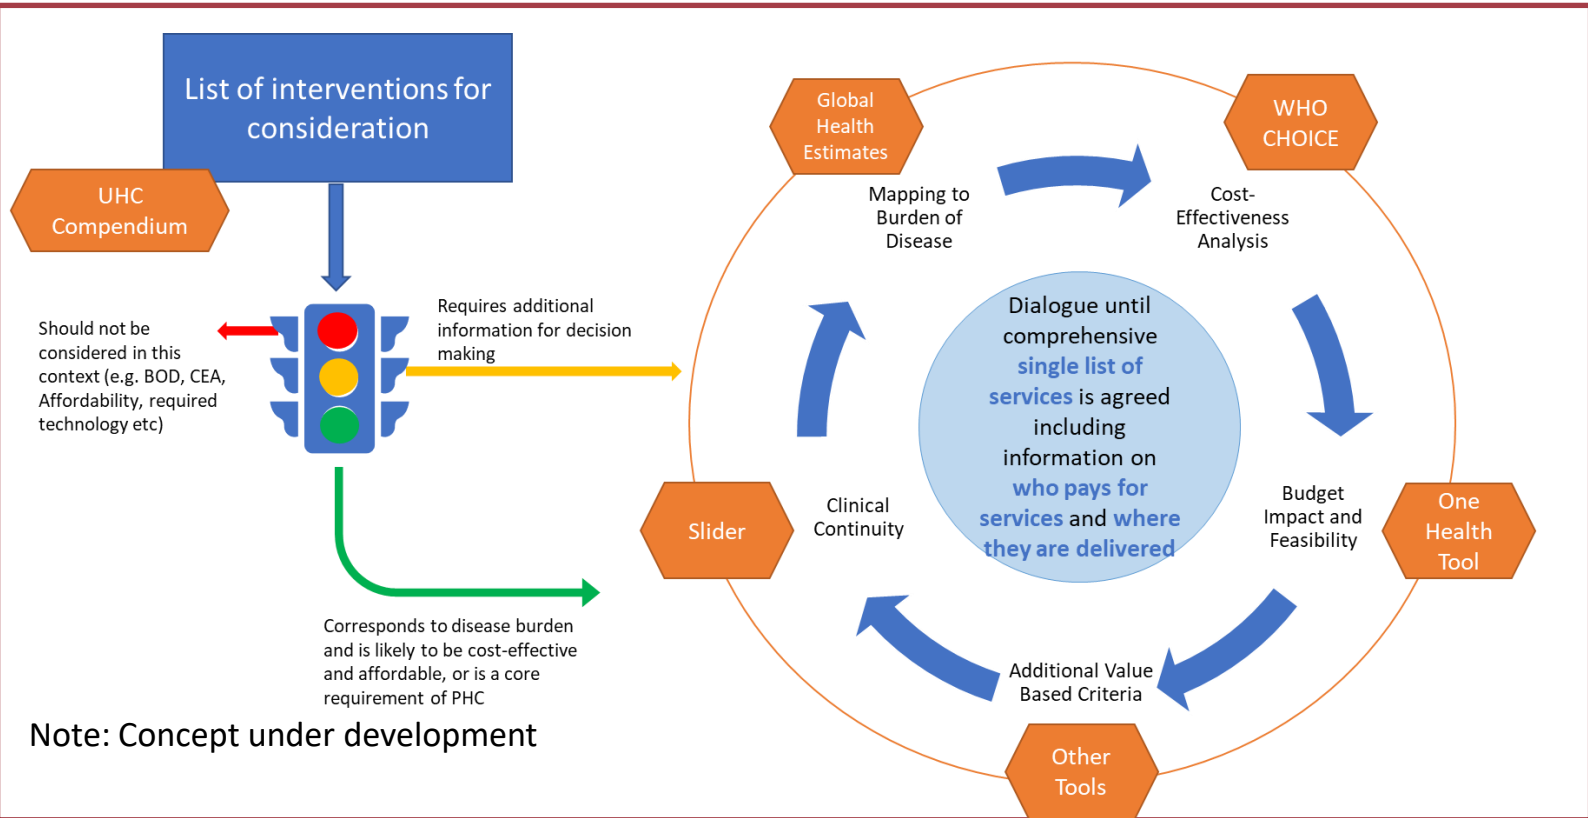

# WHO 3-D Priority setting and decision making framework

# Using the WHO UHC Compendium at country level to develop a “package”

# Country Work

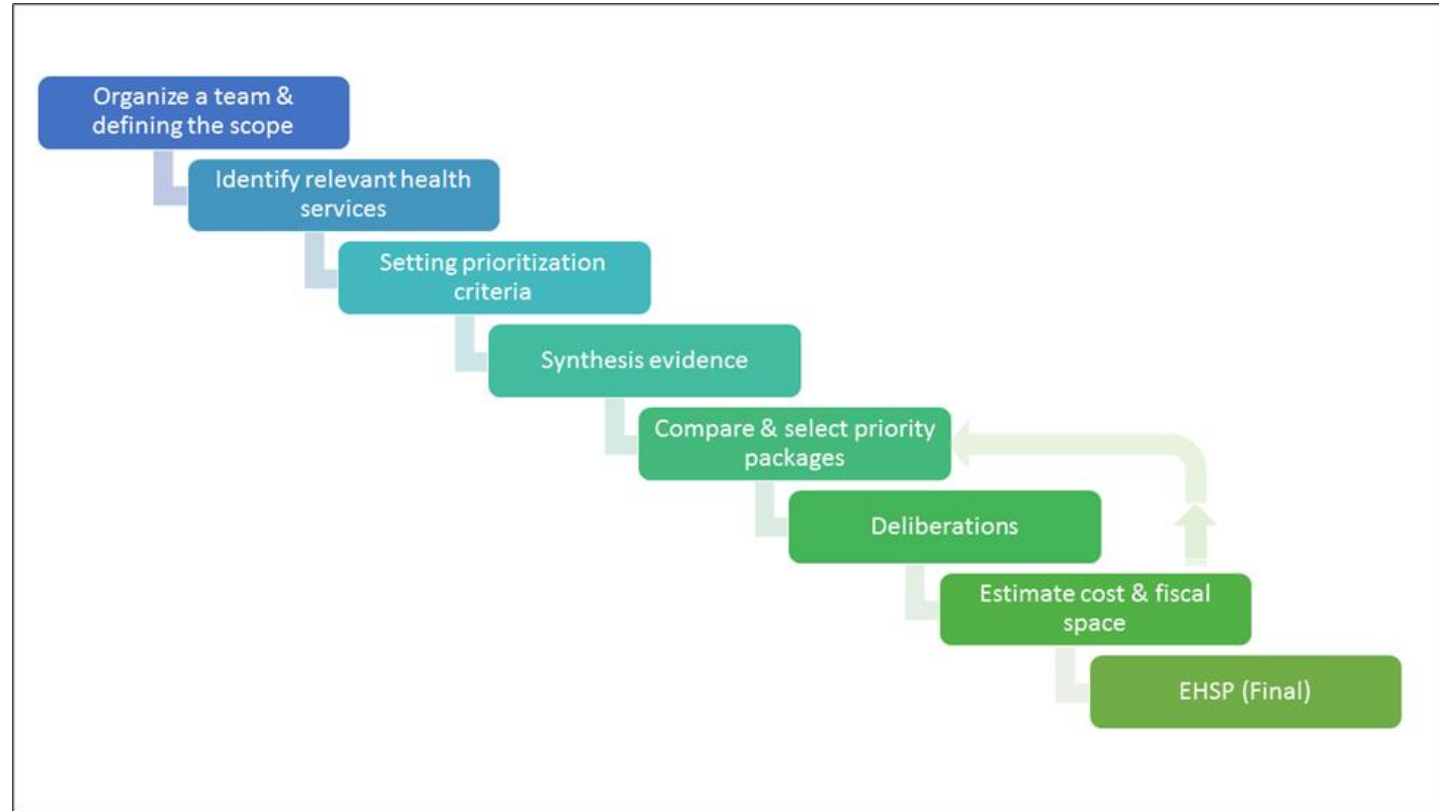

- Ensure availability of a **Basic Health Service Package (BHSP)** – fully funded, with universal access and a focus on NCDs
- Link benefit package with **health financing mechanisms**
- **Build capacity**, setting up Health Technology Assessment (HTA) mechanism and sensitize to NCDs

**BHSP** including NCD services – which will hopefully expand over the years

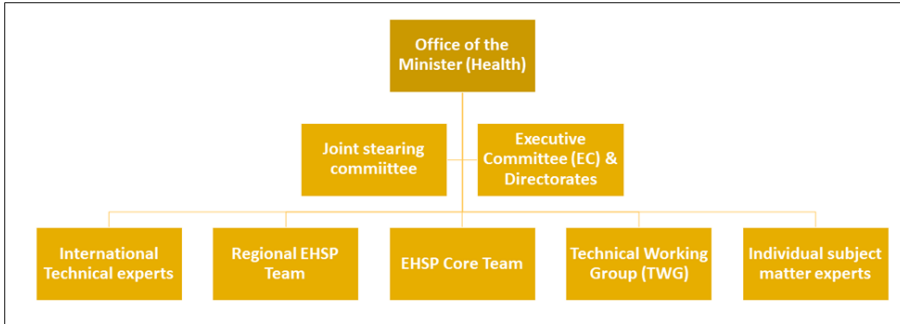

**CAPACITY BUILDING** - HTA process including the collection and use of NCDs data to inform future expansions of the BHSP

### ABSTRACT

To make progress toward universal health coverage, countries should define the type and mix of health services that respond to their populations' needs. Ethiopia revised its essential health services package (EHSP) in 2019. This paper describes the process, methodology and key features of the new EHSP. A total of 35 consultative workshops were convened with experts and the public to define the scope of the revision, develop a list of health interventions, agree on the prioritization criteria, gather evidence and compare health interventions. Seven prioritization criteria were employed: disease burden, cost effectiveness, equity, financial risk protection, budget impact, public acceptability and political acceptability. In the first phase, 1,749 interventions were identified, including existing and new interventions, which were regrouped and reorganized to identify 1,442 interventions as relevant. The second phase removed interventions that did not match the burden of disease or were not relevant in the Ethiopian setting, reducing the number of interventions to 1,018. These were evaluated further and ranked by the other criteria. Finally, 594 interventions were classified as high priority (58%), 213 as medium priorities (21%) and 211 as low priority interventions (21%). The current policy is to provide 570 interventions (56%) free of charge while guaranteeing the availability of the remaining services with cost-sharing (38%) and cost-recovery (6%) mechanisms in place. In conclusion, the revision of Ethiopia's EHSP followed a participatory, inclusive and evidence-based prioritization process. The interventions included in the EHSP were comprehensive and were assigned to health care delivery platforms and linked to financing mechanisms.
