INDONESIA:
ACTION PLAN TO SUPPORT AGING CITIES
Key Take Away

Aging involves a multi-dimensional issue:
  Promote respect and dignity to elderly
  Physical environment
  Social engagement

Community-based care may be a more appropriate approach:
  Long and nation-wide CDD experience
  Elderly support in nation-wide CCT program

Economic opportunity:
  Employment
  Investment
  Insurance (long-term care)
Background: Aging Cities in Indonesia

Stages of Ageing Population Across Cities

Outcome and Target

Outcome

- **Population of Elderly**
  - 2010: 11.9 million
  - 2045: 42.8 million

- **Dependency Ratio**
  - 2010: 51.1%
  - 2045: 50.2%

- **People live in urban areas**
  - 2010: 49.9%
  - 2045: 69.1%

- **Total Fertility Rate**
  - 2010: 2.5
  - 2045: 1.9

- **Life Expectancy**
  - 2010: 69.8 years
  - 2045: 72.8 years

- **Source**:
  Population Census 1971, 1990 and 2010; Indonesia Population Projection 2010-2035

Target (2020)

- 10% provincial and municipalities are well-informed and having action plans

Streamline and mainstream the aging issues in development priorities

2010

- **11.9 million**

2045

- **42.8 million**

Scale up
Opportunities and Barriers

**OPPORTUNITIES**

- Improving the existing regulation and policies to deal with aging issues
- Existing program operates in about 269 municipalities and about 11,000 urban wards, and nation-wide CCT Program
- Initiatives by Local and Central Governments on physical environmental, housing, and budget support

**BARRIERS**

- Lack of understanding of stakeholders on aging issues
- Elderly inclusive infrastructure is not yet integrated in urban planning
- Prioritizing aging in local and national development agenda
- Lack of coordination among stakeholders
- Limited aging-oriented services
