

Program Goals and Stakeholders

Improve the water quality of urban streams in the city of São Paulo by eliminating the discharge of wastewater and the trash into them, in order to increase the comunnity's life and environmental condition

Summary balance 2007 - 2017

151 **Cleaned Streams** **Population:** 2,5 million

Metropolitan Challenges – population growth

1940

Impediments to build the sewage system

2005

◆Removing and Relocating people occupying stream margins

Metropolitan Occurrences

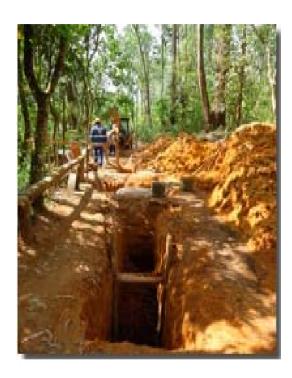

Oil at sewage network;

◆Repairs and cleanings at the sewage network;

♦ Promote the connection of laterals to the network;

Brazil: Separated System (Wastewater and stormwater)

Stormwater in the Wastewater System

Roof Drain

Stormwater Sewer

Stormwater Sewer

Separated System

Stormwater Sewer

Sanitary Sewer

to lake to treatment plant

Wastewater in the Stormwater System

♦Eliminating the clandestine wastewater connections in stormwaters pipelines

Metropolitan Occurrences

Trash and diffuse pollution carried by rainwater and street cleaning

- **♦**Cleaning riverbanks and riverbeds
- **♦**Community Education

Education and community engagement

Collaborative Governance Program

♦Keeping the streams cleaned depends on community participation

Sabesp and Municipality of São Paulo Responsabilities

♦Repairs and cleanings in the sewage lines;

- ♦ Promote the connection of laterals to the sewage lines;
- ♦Eliminating the clandestine sewage connections in stormwater pipelines
- **♦**Collaborative Governance Program (community education and engagement).

- Cleaning riverbanks and riverbeds;
- ♦ Removing and relocating people occupying stream margins

The Clean Stream Program

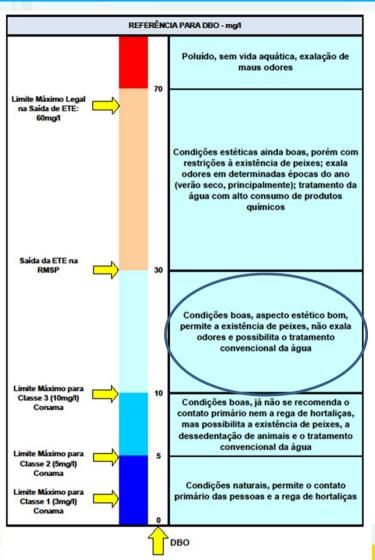

sabesp

Tracking and management

Indicator: Biochemical Oxygen Demand (BOD)

BOD: Measurement of the oxygen needed by bacteria to consume organic matter mg/l

Goal: BOD < 30 mg/l

Visual Indicators

- No odor
- Clear water
- No Trash
- No Bush
- Aquatic life plants and small fishes

Tracking | Instant prober

The Clean Stream Program

sabesp

Results achieved

Mandaqui Stream

2011, September BOD 240 mg/l

Area: 12 square miles Population: 460,000

2018, April BOD 21 mg/l

- 6 miles sewage network
- 455 connections

Uberaba Stream: Pinheiros Afluent

2009, March BOD = 85 mg/l 2018, April BOD = 16 mg/l

• Area: 6 square miles

• Population: 240,000

• 0,8 mile of sewage network

Pacaembu Stream

2016, August BOD = 140 mg/l

Area: 1,5 square mile

Population: 28,000

56 miles sewage lines

Pacaembu Resevoir

2018, **March** BOD = **10**mg/l

Main Success Factors

Partnership between Sabesp and Municipalities

Education and comunnity engagement

Funding

Tiete Project

Relocation of people living at stream margins

Continuous tracking and management

Clean Stream Program

Then,

Why we have a Cleaned Stream Program?

It's the garantee that all of the sewage system was done and our maintenance and operation are working very well

It's about public health, environment and the the comunnity's quality of life

THANK YOU VERY MUCH!
