## Global Academy

“

NIA Global Academy was established in 2014 to provide professional training courses with the aim to share Korea's experience in digital government/ICT policy with the world.

The training courses are mainly targeted at the government officials and experts in developing countries to strengthen the policy capabilities of the digital government/ICT sectors. Since 2014, 5,688 people from 117 countries have completed the courses provided by NIA Global Academy.

## Clova CareCall

### 01 Introduction

Clova CareCall, developed by a Korean ICT company Naver, is an AI solution for telephone counseling and automatic response to health inquiries via the company's AI platform called Clova. Previously, the public health centers made calls to those under active monitoring in order to check their daily health condition. Now, this AI platform monitors them by making automatic calls twice a day (at 9am and 3pm) to check whether they have developed any symptoms and their health state is directly reported to the public officials of local governments.

Naver provides technical support for the operation of Clova CareCall and Sejong Telecom, a key telecom service provider, pays communication expenses. Clova CareCall is currently used in Seongnam City, Gyeonggi Province on a pilot basis.

### 02 Background and Purpose

In March 2020, when the COVID-19 was in full swing, the Ministry of the Interior and Safety (MOIS) developed the 'self-quarantine safety protection app' for those under self-isolation and made every effort to stop the spread of COVID-19. As for those under active monitoring, however, employees at public health centers had to make phone calls manually to check their health condition. Therefore, Naver introduced the AI CareCall service for the first time in Korea in cooperation with Seongnam city, where its headquarter is located, with the aim of contributing to local community with its advanced technologies (Mar 9, 2020).

Also, Naver applied the 'face mask inventory information' function to its Smart Call service since April 7, 2020 in order to reduce much workload in pharmacies that were busy responding to customers regarding COVID-19. When a customer asks Smart Call for face mask inventory, Smart Call informs the real-time mask inventory based on pharmacy information registered on Naver's 'Smart Place'.

## 03 Pre-requisite

Database of monitoring targets is needed to operate the Clova CareCall service. Based on the data, Clova Carecall, which is applied with AI technology such as voice recognition, makes an auto-call to the target via wired, wireless, and Internet networks, and all calls are stored in the cloud.

| Type            | Requirement   |
|-----------------|---|
| Used Technology | <ul style="list-style-type: none"><li>AI (Speech Recognition, Natural Language Processing, Speech Synthesis, Text Analysis, etc.)</li><li>Cloud</li></ul> |

## 04 System Configuration

### 1. System Process

Clova CareCall automatically calls those under active monitoring for potential infection of COVID-19 twice a day to check their health condition and whether they have any symptoms related to the disease.

First, the public health centers submit data on those under active monitoring to Clova CareCall system and the system makes phone calls to them and check their health state based on automated scenarios. The results are reported to the public health centers so they can take measures deemed necessary.

The screenshot displays the K-MOOC website. At the top left is the K-MOOC logo. To its right is a search bar with the text '분류 탐색' and a magnifying glass icon. Further right are links for '로그인' (Login), '회원가입' (Sign Up), and language options 'Kor' and 'Eng'. Below the header, there are navigation links: 'K-MOOC 소개' (Introduction), '강좌찾기' (Find Course), and '커뮤니티' (Community). The main content area features a large banner for the course 'ICT-based Responses to COVID-19 of Korea'. The banner includes the logos of the Ministry of the Interior and Safety (MOIS) and the National Information Society Agency (NIA), along with a graphic of a globe and a medical cross. Below the banner, there are two buttons: a green '청강 등록' (Register) button and a grey '학습하기' (Learn) button. A blue speech bubble points to the '학습하기' button with the text 'Visit <http://kmooc.kr>'. Below the banner, there is a section titled 'Course Information' with a hand icon. The text in this section describes the course's purpose: to share the Korean government's experiences in responding to COVID-19 using digital government and ICT. It also states that the course aims to improve policy capability to respond to infectious diseases based on ICT, suitable for each country's situation. On the right side of the page, there are social media icons for Twitter, Facebook, Email, and Naver. Below these icons, there are sections for '분야' (Field) and '난이도' (Difficulty).

Course Information

The Ministry of the Interior and Safety(MOIS) and National Information Society Agency(NIA) developed a course titled "ICT-based Responses to COVID-19 of Korea" in order to share experiences of how the Korean government responds to COVID-19 by utilizing digital government and ICT, informatization and ICT-based strategy to respond to infectious diseases.

This course aims to improve the policy capability to respond to infectious diseases based on ICT that is suitable for each country's situation based on an understanding of Korea's healthcare informatization and ICT-based strategy to respond to infectious diseases.
